## 911 CONSOLE

Adaptaspace 911 console is a durable ergonomically designed console uniquely configured for 24/7 call center and emergency environments.

By using a very simple console and small number of parts and a combination of standard panels for privacy and sound attenuation and regular cabinets for computers and communication equipment, 911 can easily be configured for any application: 9-1-1 /emergency communication command and control center, surveillance, security monitoring, call centers, etc.

The console consists of 2 full sit/stand decks, operated independently:

- The front deck accommodates all equipments that need to be reached by the user for carrying out his duties: keyboards, mice, phones, microphones, phone jacks and all controls such as raise/lower, environmental control.
- The rear deck is for displays and monitors which may be on their original stand or on monitor arms. A sliding platform is available for additional front/rear adjustment.

The panels consist of a monolithic acoustic core and full height or segmented inserts. They include a built-in cable raceways and power outlets. Combined with a full set of vertical cable chains and horizontal cable trays, they provide an Integrated Cable Management System that simplifies installation and maintenance.

Multiple combinations of colors for the fabric panels and work-surfaces will match any interior design requirement, whether the center is new or retrofitted.
